

Framework Document and Declaration of Independent Work

The framework and declaration must be complete and handed in (either as a .doc or .pdf) for your assignment to be graded!

PERSONAL DECLARATION

"This assignment constitutes original work by ME (name and student number filled in below). Any sources that were used to help in the assignment are properly documented in references below and noted in the comments in the pages. In addition, no part of the document has been submitted for any other course."

Name: Harshil Rakeshkumar Varia

Student Number: B00919242

Date: 24th March 2024

(Please note, filling in your name, BannerID and Date, it means that you have read and agree that the above statement is true. Also note, that you must 'sign' this declaration for the Assignment to be graded).

FRAMEWORK DOCUMENT

Assignment Number: 4

Describe purpose of site/assignment:

Expanding upon the previous assignment and lab work, this task focuses significantly on enhancing the login.php file and implementing session management to streamline the process for users when posting events. It introduces a logout feature that clears session details, and adds functionality to createAccount.php for the registration of new group users, ensuring their details are updated in the database.

Updates to Pages/template

Note there may be more rows than pages you updated. You can remove unused rows. Or add additional ones if needed]

- Describe (overview) what you did on each page and if you were asked to make improvements from a previous assignment, make sure you describe how you addressed these.
- ALL PAGES MUST ALSO BE COMMENTED (this document does not negate the requirement for comments).

Page name (e.g., index.php)	Short Description of what you did:
-----------------------------	------------------------------------

Page 1: login.php	Based on correct username and password stored in database a group gets access to post events on the website, if wrong information is entered the error is displayed on the screen. A new session is created when the user logs in and is used until they logout.
Page 2. createAccount.php	If a user create a account the session info is stored and used through out the session, the Login and Groups table are changed in the database.
Page 3. groups.php	Based on the new created Group the groups.php updates the displayed groups.
Page 4. post.php	Once the group is logged in, the groupName is displayed.
Page 5. single-post.php, events.php	The sidebar panel Upcoming and Latest Added are updated through a query which displays the ascending and descending order of event dates on the sidebar. If the user clicks on the side bar they are redirected to the particular event single-post.php page.
